

MAKE A NON-TOXIC MOSQUITO TRAP

Known as the “bucket of doom” this DIY trap uses an organic approved, highly-targeted biological control that kills only the larvae of mosquitos, black flies, and fungus gnats without harming people, pets, wildlife, or pollinators.

+

+

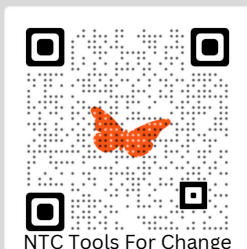

5 gallon bucket

Bti dunks

Hydroponic lid

Instructions: Drill a hole near the top of the bucket for rain overflow. Fill with water. Add a handful of leaves, straw, or grass clippings. Add 1/4 of a mosquito dunk. Cover with a lid for safety. Mosquitoes lay their eggs, and the Bti kills the larvae before they can emerge as biting adults.
